

Introducing Drata Compliance as Code BETA

Automatically identify and fix compliance and policy gaps as your developers build, for continuous compliance across your software development lifecycle.

DRATA

Solution Brief

Drata Compliance as Code expands continuous control monitoring and testing to pre-production environments. Integrate into the DevOps toolchain to analyze infrastructure code and catch compliance issues in real time. Automate remediation to address issues before they make it to production, and maintain compliance.

Explore the Future of Continuous Compliance

More Visibility and Control

Leverage over 25+ new tests that scan for the most common infrastructure misconfigurations so you can quickly find and resolve costly issues and minimize risk well before production.

Developer-Friendly Remediation

Automatically generate pull requests complete with the exact location and recommended code fixes so your developers have everything they need to address compliance issues—and all without leaving their dev environment.

Frictionless Audits

Speed up the time it takes to complete audits and maintain compliance with every release by proactively identifying and remediating compliance and policy gaps in your Infrastructure as Code (IaC).

50%

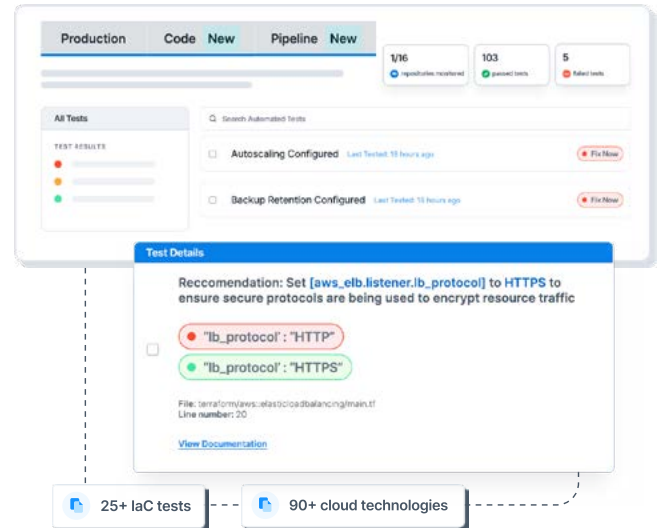

Reduction in the cost of delivering security and compliance recommendations

4 Hours

Of your developer's time saved per security and compliance gap

End-to-end coverage

With support for SOC 2, PCI, ISO, and more

Seamlessly Integrated Into Your DevOps Toolchain
